Heating, Cooling & Ventilation: Sustainable technologies for a better life

Geert Vergoossen

Sustainable Innovation/ Energy systems
student, Eindhoven University of Technology

Study: Sustainable Innovation, specialization in energy systems

Hobbies: Debating, sports (Football, squash, fitness), new technologies (e.g. Blockchain, AI)

Ambition: To make a change in the energy system

Awards: Dutch National Champion Policy Debating

Driven by a curiosity for people and technology, I'm constantly on the lookout for new innovations which will shape the future. In my opinion you should always set personal goals to develop yourself in whatever way possible. Through my training in hard science and problem based learning I come at challenges from an abstract starting block. I truly believe interdisciplinary thinking boosts innovation and bridges the gap between the Alpha and Beta sciences. With a passion for debating I try to keep my mind fresh and learn about different ideas from different people. Especially by listening and debating in a structured way, problems can be solved & consensuses can be made in every context what so ever.
